Aspera Marketplace

Cursor status report — sync with Claude

Prepared by **Cursor** · 25 Oct 2026 (Asia/Calcutta) · Live site: **https://aspera.market**
Purpose: put Cursor and Claude on the same page after Claude's last shared report / handoff.

Baseline (Claude's last report): Claude's complete session record through money integrity, dashboard safety, seller payout, admin queue, TOTP gate, deploy-lock fix, Catalogue v2 (flag OFF), custom domain `aspera.market`, and coordination docs (`SESSION_HANDOFF.md` / Cursor Reference PDF / master docs). That work was merged to `main` and live.

This document covers everything Cursor shipped after that handoff — through Wave 0 money P0s, the Pune PC / Express pivot, catalogue scale-up, PC Builder, cascading compatibility, and mega-menu brand logos (tight layout). Production tip at report time: mega-menu tighten commit `8f8879c`.

1. Shared facts both agents must keep

- **Product:** Pune PC-components marketplace (Express quick-commerce positioning) — not fashion/Meesho demo.
- **Live URL:** https://aspera.market (also www). Payments still mocked until Razorpay.
- **Stack:** Next.js 16 / React 19 / Prisma 6 / Neon Postgres / pnpm / Node 24 on Vercel.
- **Money:** paise integers, server-authoritative; use `formatPaise`, `refund-math`, ledger posts.
- **Migrations:** additive only; production `vercel-build.mjs` runs migrate with P1002 retry; previews do not migrate.
- **Workflow:** discuss → approve → implement; after UI changes **deploy production** so the owner never reviews a stale build.
- **Light theme only** — no dark: variants; status labels via `status-labels.ts`.

2. Claude baseline (do not re-litigate)

Summarized from Claude's detailed session record / handoff so Cursor does not redo it.

Area	PRs	Outcome
Money integrity (Sprint 1)	#58	Refund math, ledger posts, no double-refund, settlements net refunds, line-scoped refunds
Storefront trust / checkout UX	#58	Mock-pay language removed; one-step checkout; PDP ETA; cart empty state
Dashboard safety + design tokens	#59	Confirmations, audit reasons, status labels, semantic colors
Seller payout waterfall	#60	Gross → commission → TCS → net
Admin seller queue	#63–#64	Bounded search/pagination, bulk approve/reject

Admin TOTP + login routing	`#65, #67`	`ENABLE_ADMIN_TOTP`; role-based post-login
Deploy lock / migrate	`#66 (+ later harden)`	Migrate only on production; retries for P1002
Catalogue v2	`#68–#70`	Schema/service/backfill behind flag **OFF**
Custom domain + docs	`#71, #61/#62/#72, #87–#91`	aspera.market; SESSION_HANDOFF; master docs; Medusa gap analysis
Pune PC pivot (Claude)	`#83–#85`	90 PC products, 9 categories, mega-menu rewrite, PC home

3. Cursor work since Claude's report (chronological)

3.1 Wave 0 — money-path trust PR #92 open / shipped on branch

- Coupon-net refunds; line-scoped refunds everywhere; claims deny `not_delivered` on cancelled groups
- Unpaid cancel releases stock; payment restart re-reserves or fails closed
- Mock pay gated on `paymentsAreMockOnly()` so demo pay works on aspera.market
- Seller writes require approved status; COD removed from PDP

3.2 Storefront cleanup + seller redesign merged / live lineage

- `#93` Remove leftover fashion content — PC-relevant copy
- `#94` Header delivery-pincode anchor + grid add-to-cart
- `#95` Seller dashboard redesign

3.3 Aspera Forge landing + Express productization live on aspera.market

PR	What shipped
`#96`	**Aspera Forge** world-class PC marketplace landing (hero, discovery, brand surfaces)
`#97`	Fix home catalogue bottom scroll flicker (infinite-scroll sentinel)
`#98`	**MD Computers catalogue import** — ~384 PC SKUs / 12 categories into Aspera
`#99`	**Aspera Express** — Blinkit/Zepto-style quick-commerce ETA & trust copy (75–90 mins hub zones)
`#100`	Flipkart-style PDP specs & descriptions (A→B→C enrichment)
`#101`	Category-specific browse facet filters (multi-select) + brands scoped to category
`#102`	PDP left-column continuity — fill empty band under gallery with highlights/specs

3.4 Visual system + mega-menu + hero live

PR	What shipped
`#103`	Mega-menu: fill empty right panel with category brand tiles on hover
`#104`	Taller hero + redesigned slider / "Start a build" imagery
`#105`	**Sober white storefront** — remove nested grey background wells; hairline borders

3.5 PC Builder (Express advantage over BuildMyPC) live /pc-builder

PR	What shipped
#106	Express PC Builder: live in-stock picker, socket/RAM/PSU checks, wattage estimate, Gaming/Creator/Office presets, shareable build links, one-click add-build-to-cart. Linked from nav + home “Start a build”.
#107	**Cascading compatibility lock:** after CPU (or any part) is chosen, next slot shows only compatible SKUs; auto-advance; prune incompatible downstream picks; dual client/API facet enforcement. Deployed to production after owner call-out that preview-only was not enough.

3.6 Mega-menu logos (latest iteration) live

PR #108 — sequence:

1. First attempt mistakenly removed left facet columns (owner rejected).
2. Restored columns (e.g. Motherboards: CPU platform / Memory & form) + Popular brands panel.
3. Replaced monograms / product-box thumbnails with **full SVG brand logos** under `public/brand-logos/`.
4. Tightened logo tiles (~48px) so mega-menu height follows category text — no tall empty cards.

Production deploy: commit `8f8879c` · deployment `dpl_GQHvgzM5sS2pNF5ktoVa2WUzKvy8`.

4. Production snapshot (25 Oct 2026)

Surface	State
Home / Express positioning	**Live — Forge landing, sober white surfaces, Express ETA messaging**
Catalogue	**MD import scale + category facets; PC categories in mega-menu**
PDP	**Specs enrichment + left-column continuity**
PC Builder	**https://aspera.market/pc-builder — cascading compatibility**
Mega-menu	**Facet columns + compact real brand logos**
Payments	Still mock / demo pay path; Razorpay not started (Wave 2)
Catalogue v2 flag	Still OFF (Claude design intact)

5. Open PR stack Cursor expects Claude to know

These may still be open / stacked on feature branches rather than squash-merged to main. Production often tracks the tip of the Express/PC stack via direct branch deploys.

PR	Title	Notes
#92	Wave 0 money-path trust	Core money P0s
#96–#105	Forge → Express → facets → hero → sober white	Storefront stack
#106	PC Builder	/pc-builder
#107	Builder compatibility cascade	Compat locks

#108	Mega-menu logos (restored + tightened)	Latest UI

6. Explicit operating agreements (both agents)

1. **Deploy production after every owner-visible change.** Preview-only caused false “bug still there” reports on PC Builder compat — fixed by always promoting to aspera.market.
2. **Do not strip mega-menu facet columns** when adjusting brand logos — columns + logos together; keep height tight to text.
3. **PC / Express is the product.** Do not reintroduce fashion/Meesho merchandising.
4. **Money path:** Wave 0 rules stand; Wave 1 = outbox/cron/blob/notifications + separate prod Neon; Wave 2 = saga + Razorpay flag (not started).
5. **Docs of record:** Claude updates `docs/SESSION_HANDOFF.md`; Cursor appends post-handoff sections / this PDF under `docs/reports/`.

7. Suggested next for Claude (or Cursor)

- Merge / restack open PRs (#92, #96–#108) cleanly onto `main` if desired.
- Wave 1 infra (outbox publisher, cron, blob, NotificationPort) per Medusa gap plan.
- Repoint local `prisma/seed.ts` to PC seed (Claude follow-up still open).
- Optional: true trademark SVG pack for remaining wordmark brands (Thermaltake, Ant Esports, etc.).
- Operator dashboard table pass (Claude deferred).

8. Key file map (Cursor additions)

Path	Role
`src/lib/pc-builder.ts`	Slots, compat facets, prune, wattage, presets
`src/components/pc-builder-client.tsx`	Builder UI, auto-advance, lock chips
`src/app/api/pc-builder/parts/route.ts`	In-stock parts API + facet re-filter
`src/lib/mega-menu.ts`	PC mega-menu IA + brand logo URLs
`src/components/site-header-client.tsx`	Mega panel (columns + compact logos)
`public/brand-logos/*.svg`	Brand marks for mega-menu / lanes
`scripts/vercel-build.mjs`	Prod-only migrate + P1002 retry

Document ID: ASPERA-CURSOR-SYNC-2026-10-25 · Authors: Cursor (Composer) for owner + Claude alignment · Companion: docs/SESSION_HANDOFF.md (Claude) · Live: https://aspera.market · This PDF should be treated as the Cursor half of the shared status; Claude may append a reciprocal section when continuing.
